Ethanol versus swabs: what is a better tool to preserve faecal samples for non-invasive genetic analyses?

E. Velli, E. Fabbri, M. Galaverni, F. Mattucci, L. Mattioli, L. Molinari, R. Caniglia

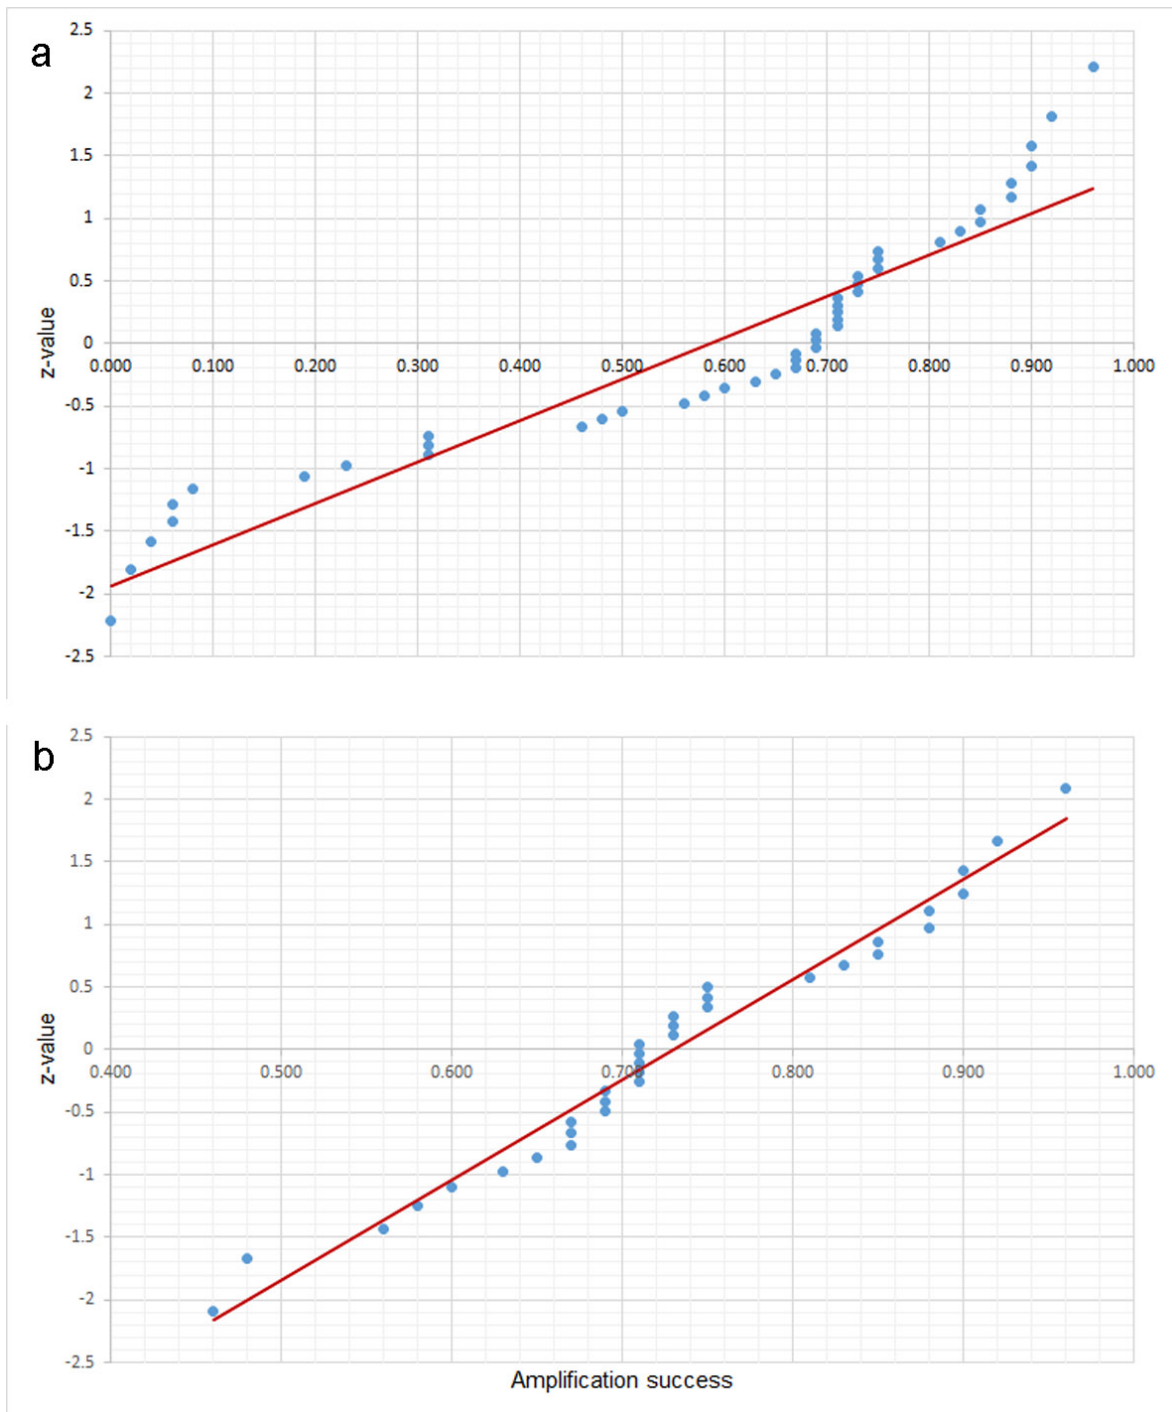

Figure S1: Normality distribution plots of the mean amplification success values (dots) referred to: a) the entire dataset including both genotyped and not genotyped samples; b) a reduced dataset including only genotyped samples. The red lines indicate the normality tendency lines for each dataset
