Bats of the Bijagós Islands (Guinea-Bissau, West Africa): understanding the long-term consequences of fragmentation on bat assemblages
 Ana Rainho, Jorge M. Palmeirim

Table S1: Site name, habitat and capture effort (number of hours per 12-meter net) of each site surveyed. For islands, surface area, distance to nearest mainland and distance to nearest island are also shown.

Region / Site	Habitat type	Capture effort (hours / 12 m net)	Nr. Species	Area (km ²)	Distance (km)	
					Mainland	Island
Cacheu						
Suzana / Elia	Wetlands, orchards, villages	36	4			
Bufa	Wetlands	18	9			
S. Domingos	Wetlands, savanna	24	10			
Cacheu	Wetlands, dry forest, savanna	42	5			
Cantanhez						
Cunfa	Wetlands, forest	24	8			
Afia	Wetlands, forest	49	5			
Amindara	Forest	47	3			
Jemberen	Forest	29	4			
Canamine	Forest	30	7			
Bijagós						
Bubaque	Wetlands, orchards	60	4	48.0	40	0.86
Orango	Wetlands, orchards, villages, dry forest	42	7	26.1	74	0.46
Canogo	Wetlands, dry forest	16	2	63.2	63	0.46
João Vieira	Wetlands, forest, forest edge	42	7	9.0	29	3.88
Meio	Dry forest, forest edge	33	3	4.22	38	2.85
Cavalos	Wetlands, forest edge	16	4	2.19	39	2.85
Poilão	Forest	36	4	0.43	51	11.57
