Age and habitat quality matters: isotopic variation of two sympatric species of rodents in Neotropical Forest

Bovendorp R.S., Libardi G.S., Sarmiento M.M.M., Camargo P.B., Percequillo A.R.

Table S4 Concurrent candidate models for *Euryoryzomys russatus* and *Sooretamys angouya* isotopes values (Carbon/Nitrogen ratio) performed by Linear Models (lm) fitted on Gaussian distribution.

Models	Response variable	Explanatory variable	Family model
1		1	
2		Grid	
3		Plant sources	
4	C/N ratio (<i>E.russatus</i>) ~	Arthropod sources	
5		Plant sources + Arthropod sources	Gaussian
6		Plant sources + Grid	
7	C/N ratio (<i>S. angouya</i>) ~	Arthropod sources + Grid	
8		Plant sources + Arthropod sources + Grid	
9		Global
