

*Supplementary Information*

Hidden diversity in the Caucasian mountains: an example of birch mice (Rodentia, Sminthidae, *Sicista*)

Rusin M., Lebedev V., Matrosova V., Zemlemerova E., Lopatina N., Bannikova A.

**Table S1** Descriptive statistics for the genetic markers, summarized for all studied *Sicista* species. N- sample size; Cons – conservative positions, Var – variable positions, Pi – parsimony-informative positions; % var - variability of a genetic marker is calculated as the sample size divided by the number of variable positions; H<sub>0</sub>- observed heterozygosity is calculated as the proportion of heterozygotes detected in the sample size. Nucleotide composition values are given only for the third positions in the triplets.

marker	fragment size, bp	size in analysis, bp	N	Cons	Var	P <sub>i</sub>	% var	H <sub>0</sub> , %	Nucleotide composition (#3 Positions), T/C/A/G, %
<i>CYT b</i>	1084-1140	1140	33	688	452	40	39.7	0	25/39.2/31.5/4.3
